CSR

Will not rust, warp or corrode

Monier's concrete roof tiles will not rust, warp or corrode, a problem with other roofing materials.

Tank water safe

The water that runs off your Monier tiles into rainwater tanks is clean and safe. Monier tiles are made from naturally occurring materials with no added chemicals or dangerous materials.

Impervious to frost and ice

Monier roof tiles are ideal for those living in colder climates. They are impervious to the effects of frost and ice, and will never crack or warp, no matter how cold it gets outside.

Provides thermal insulation

Monier roof tiles help to keep the cold out and the heat in, in the winter... and the heat out and the cool in, in the summer.

Salt safe

Monier roof tiles are ideal for coastal locations that endure the wind, spray and salt of the ocean. All Monier roof tiles are salt safe and will not corrode over time.

Provides acoustic insulation

Monier roof tiles also assist in keeping unwanted noise out. Their advanced insulation properties mean that the only noise in your home will be the noise created by you and your family.

Storm Defence

Monier offers additional ways to safeguard your house from the weather with its Storm Defence System. Please see www.monier.com.au for more information.

CAT Colour

Monier's superior colour application technology delivers colour onto the body of the tile. A water-based system that is softer on the environment yet gives a more consistent, deeper and longer lasting colour. Tested against traditional solvent based systems, CAT Colour has approximately 45% better colour consistency and richness.

A-LINE RIDGING

A-Line ridging will enhance the look of your new flat profile roof by aligning ridge capping end-to-end to deliver a modern uncluttered finish.

HOMESTEAD

Monier's™ Homestead roof tile, reflects the character and natural beauty of traditional 'hand-split timber shakes'. With a look that is both timeless and enduring this classically styled tile retains an authentic charm that will enhance any modern or period Australian home

LIVING IN STYLE

With its 'hewn stone' finish Monier's™ Cambridge is the ideal choice for the discerning home owner. Its unique appearance complements both contemporary and classically styled architecture, whilst conveying a level of sophistication that will be the envy of your neighbours.

Cambridge in Soho Night 

CAMBRIDGE

 Georgian in Soho Night

Monier™ Georgian roof tiles perfectly combine the rich textures of traditional shingles with modern day materials to create a classic look that is truly enduring, stylish and will complement many contemporary home designs.

GEORGIAN

MADISON

'Sophisticated' best describes the look of Madison by Monier™. This roof tile features a centre shadow line that enhances its aesthetic appeal, creating a look that is unashamedly minimalist, very stylish and exclusive. If you want 'the look' it must be Madison.

Monier's superior colour application technology delivers colour throughout the body of the tile. A water-based system that is softer on the environment yet gives a more consistent, deeper and longer lasting colour. Tested against traditional solvent based systems. CAT Colour has approximately 45% better colour consistency and richness.

TRADITIONAL

Colours have been reproduced as faithfully as possible, however, actual colours may vary due to the printing process. We urge all customers to view tiles on display before making your decision. Technical information such as roof pitches, rafter lengths and sarking can be found on the Monier website at www.monier.com.au

The performance of Monier concrete tiles is guaranteed for 50 years – see guarantee for details. However, as a purchaser of Monier concrete tiles it is important that you understand their design performance. Concrete tiles are created from the controlled formulation of raw materials extruded under high pressure to achieve the tile's strength and resistance to water penetration. The colour applied to or incorporated into the body is purely decorative. Each tile's colour may vary in shades throughout the roof. When first installed, concrete tiles may experience some discolouration caused by the migration of lime salts to the surface. This is known as efflorescence. This condition is usually temporary. All roofs are expected to progressively return to an even matt appearance over time. All tiles will contain small blemishes. During transportation and installation other small blemishes such as scuffing and chip marks may occur. Small blemishes will not detract from the weather proofing and should not be seen as a product fault. Colours have been reproduced as faithfully as possible, however, some images contained in this brochure have been digitally altered and actual tile colours may differ to varying degrees. We urge all customers to view tiles on display before making your decision. Always check the delivered product before installation.
